PROFESSIONAL OBJECTIVE

Motivated Software Engineer with **1 year of industry experience** at **Trellix**, a leading **cybersecurity company**, contributing across both test automation and frontend development on the **Endpoint Detection and Response (EDR)** product. Passionate about building reliable, scalable software in security-critical environments, with hands-on expertise in **Python-based test automation, Angular/TypeScript frontend development**, and CI/CD-integrated testing workflows. Seeking to leverage a cross-functional engineering background to deliver high-quality software in dynamic, impact-driven teams.

WORK EXPERIENCE

Trellix

Bangalore, India

Software Engineer, Apprentice

Jul 2025 – Present

- Engineered a **production-grade Selenium (Python) automation framework** from scratch using Page Object Model, JSON configuration, structured logging, HTML reporting, and rerun-on-failure, enabling zero-manual-setup test execution across the EDR product.
- Automated **250+ test cases in 45 days**, cutting manual regression effort by **50%** and accelerating release validation cycles across the product.
- Developed **Angular/TypeScript** UI features and resolved **30+ component-level defects** on the EDR front-end, delivering enhancements through structured PR and code-review cycles.
- Debugged and fixed **AG-Grid** configuration failures (cell-selection, clipboard, sort/resize/pagination) across **5+ dashboards** after a major library upgrade, restoring full functionality within the release window.
- Identified and documented **200+ defects** through exploratory, smoke, sanity, and regression testing; triaged and tracked all issues end-to-end in Jira and Xray.
- Configured **GitHub Actions CI/CD** with cross-browser and parallel test execution, reducing feedback time for developers; rebuilt **Selenium Grid** with static IP for stable distributed test runs on TeamCity.
- Authored **BDD test suites** in Python (pytest-bdd/Gherkin) for **5 EDR product modules** (Collection, IOC Detection Rules, Historical Search, Monitoring, Device Search) and validated REST API responses using Postman.

TECHNICAL SKILLS

- Languages:** JavaScript (ES6+), TypeScript, Python, Java, SQL, HTML5, CSS3, PHP
- Frontend:** Angular, React.js, Redux, Bootstrap, AG-Grid
- Backend:** Node.js, MySQL, MongoDB, REST APIs, Microservices
- Automation:** Selenium WebDriver (Python), pytest-bdd (BDD/Gherkin), Selenium Grid, POM, Cross-Browser Testing, Parallel Execution, Playwright (in progress)
- Testing Types:** UI, Regression, Functional, Smoke, Sanity, API Testing, Alert Validation
- Core CS:** DSA, OOP, DBMS, Operating Systems, Computer Networks
- AI & LLM:** Claude, GitHub Copilot, Prompt Engineering, LLMs, RAG
- Methodologies:** Agile, Scrum, SDLC, Test Planning, Quality Assurance (QA)
- Tools:** Git, GitHub, GitHub Actions, Jira, TeamCity, Xray, Postman, Confluence, VS Code

PROJECTS

E-Commerce Platform (React.js, Redux, JavaScript, CSS3)

Live Demo

- Built a responsive e-commerce app with **React component-driven architecture** and **Redux** for global state management, covering product listing, cart, quantity management, and multi-step checkout with consistent UX across all screen sizes.
- Designed reusable UI components (product cards, cart drawer, order summary) with business logic in Redux slices; deployed on **Netlify** with lazy loading and continuous deployment.

Tour & Travel Management Website (HTML5, CSS3, Bootstrap, JavaScript, PHP, MySQL)

GitHub

- Developed a full-stack travel platform with destination browsing, package selection, and booking flow using a **PHP** backend, **MySQL** for persistent data, and **Bootstrap** for a responsive mobile-first UI.
- Implemented user registration, login, and session management with server-side validation; applied dynamic JavaScript for real-time search filtering without full-page reloads.

Java 17 · Spring Boot 3.2 · Spring Cloud · Apache Kafka · Redis · PostgreSQL · MongoDB · Docker · Prometheus · Grafana

- Architected a scalable e-commerce backend using **7 independent microservices** with Spring Cloud Eureka for service discovery, and an **API Gateway** with JWT validation as the single entry point for all client requests.
- Implemented **event-driven order and payment processing** using **Apache Kafka** (order-events, payment-events topics) and applied **Redis caching** on the product catalog service to reduce MongoDB query load.
- Integrated **Prometheus and Grafana** for real-time metrics monitoring and observability across all services; orchestrated the full stack using **Docker Compose** with health checks and dependency ordering.

EDUCATION

RGUKT RKvalley (IIIT)	Kadapa, Andhra Pradesh
B.Tech, Computer Science and Engineering (CGPA: 9.1/10)	2021 – 2025
RGUKT RKvalley (IIIT)	Kadapa, Andhra Pradesh
Intermediate (MBI PC) (CGPA: 9.83/10)	2019 – 2021
A.P. Model School, Annamaiah District	Andhra Pradesh
SSC (CGPA: 10/10)	2019

CERTIFICATIONS & ACHIEVEMENTS

- **Research Publication: "Optimizing Cloud Load Balancing with PSO on XEN"**: Published in ZKG International Journal (ISSN: 2366-1313), Volume IX, Issue II, July 2024. UGC Approved and Web of Science Indexed journal with Impact Factor 5.3.
- **GATE CSE Qualified**: Cleared the national-level Graduate Aptitude Test in Engineering covering algorithms, data structures, databases, and core computer science subjects.
- **Problem Solving: HackerRank & LeetCode**: Qualified HackerRank's Problem Solving (Basic) assessment (Aug 2024) covering data structures, algorithms, sorting, and recursion; actively solving LeetCode problems across arrays, strings, linked lists, trees, and dynamic programming.
- **Functional Programming with JavaScript ES6+**: LinkedIn Learning (2025): Completed structured course covering pure functions, immutability, higher-order functions, and functional patterns in modern JavaScript.
- **AICTE PRAGYA SHAL Internship**: AI/ML internship covering the end-to-end machine learning workflow through the Helmet Detection System project built using Python and OpenCV.
